

BIPLANTOL® X2 forte

**Plant strengthening
aromatherapy
for professional cultivation**

BIPLANTOL X2 forte for general maintenance of health and strengthening against biting and sucking insect pests on ornamental plants, trees, shrubs, vegetables, and fruit and berry orchards

Vigorous plants are more robust and therefore less susceptible to attack by harmful insects.

Effects of multiple preventive applications via the soil

- **promotes plant health and vitality**
- **strengthens plants against biting and sucking insect pests**
- **encourages regeneration in plants that have been stressed by insects**
- **strengthens the plant tissue**

Simple to use

For prevention, use **regularly** every week, **spraying** the **soil** vigorously and evenly with a **0.35%** solution of Biplantol X2 forte.

i.e. mix 35 ml Biplantol X2 forte with 10 litres water for spraying (at approx. 20°C).

Or add 0.5 litres of the stock solution per hectare per week to the irrigation water.

Can generally be applied together with commercial crop strengthening products and fertilizers.

Because so many varieties are cultivated, it is advisable to perform a test application.

Approved for organic farming: complies with the EU Regulation on Organic Farming (EC) EU 834/2007 and 889/2008, listed with the FiBL (Research Institute of Organic Agriculture)

Composition:

Dynamicized homoeopathic complex containing potentiated (D6-D100) inter alia the minerals potassium, calcium, iron, magnesium, phosphorus, sulphur, vital trace elements such as boron, germanium, silicon, copper, manganese, uronic acids (plant mucilage) and ethereal oils.

*On the **Plant Strengthening Agents** list of the German Federal Office of Consumer Protection and Food Safety (BVL).*

***No adverse effects on humans, beneficial organisms or the ecosystem** if used properly and as directed (i.e. bees are not affected, no waiting time, no groundwater protection requirements).*
